E51DOM/MM Voyage to Bouvet –update March 14

Info below (initially published on November 24, 2018) has in essence not changed. Just a reminder to look for **E51DOM/MM** once the team get underway. Vessel finder [here](#).

Dedicated DX-World 3YØI updates will occur [here](#).

A short but essential update this time. An important decision to our DXpedition plans has been taken today, which will reflect in extending the initial 3YØI plans. We decided to take more provisions than initially planned. So did we regarding the fuel.

More than 90,000 diesel liters has been fueled up (approx. 1 liter = U\$1 = \$90.000 we paid from our private money). That's all because if weather permits, **we plan to stay up to 3-4 weeks at the island itself** (excluding sailing and landing time), giving much more chances for ATNOs all over the world. We are loading every list gear to the vessel. We have already installed and launched our maritime station from Cape Town's shipyard. We'll be signing as **E51DOM/mm** on way to and from the island on HF bands. As these preparations are bringing to a close, we will announce our departure and estimated on-air dates very soon.

7P8LB Lesotho –update March 13

Another challenging night with thunderstorms etc. I start to understand why 7P8 is high up on the most wanted on TB. Yesterday late evening we installed a 130meter long VLB and it seems to outperform the two VE3DO phased loops. The loops are not optimized in terms of spacing (85m), but that is what I have available. Since we are restricted on space the VLB (Very low BEV) is not more than 130 meters. However, it seems to have a better SN ratio vs. the loops. Was running FT8 on 160 for some time but suddenly high SWR on the antenna. The team are happy and do whatever they can to produce QSO's. Today I will do a new attempt to repair the 160m vertical antenna. The weather forecast for the next few days seems better and I hope this is my last repair. PS noise level on 160 on the vertical is S9+20 and on 80 meter it is S7-9. On the RX antennas the noise is still resting at S 5-7 however that is still better than S9+ 20. Thunderstorm this morning was just amazing, everything was shaking. 73 and all the best from 7P8LB team.
